

Bring your Models to the Cloud and Spool with ease.

Cloud Spooling for the Fab Shop

- **Anyone can Spool - Revit Knowledge Not Required**
- **VDC Detailers - Focus On Modeling & Coordination**
- **Reduce Revit Model Bloat**
- **Access Models Anywhere, Anytime**
- **Interactive 3D Spool Sheets**

Key Benefits of Cloud Spooling

1. Create Spools without Revit

With Cloud Spooling, your Fab and Field Teams can leverage data rich BIM Models to create and view Spool Drawings inside of MSUITE. *All without needing to be a Revit power user or have a Revit license.*

2. VDC can focus on VDC

VDC teams can easily publish signed off coordinated models to MSUITE Cloud Spooling with all the information needed to Spool & Fabricate. Now your VDC team can focus on more important detailing tasks instead of being concerned about generating Reports, BOMs, Cut-Lists, and more.

3. Reduce Revit Model Bloat

Revit Models are complex and data-heavy, causing performance and productivity gaps. Cloud Spooling reduces the strain a Revit model puts on your system, allowing Fab and Field teams to easily work on the model directly in MSUITE.

4. Access the model anywhere

MSUITE's Cloud Spooling makes BIM Models available anywhere, anytime via the Autodesk platform integration. Your Fab and Field teams can access the important model information they need without additional licenses, at their fingertips in seconds.
